

Sri Naidu

SAP ATTP Serialization Consultant | Techno-Functional

Track & Trace • GS1 / EPCIS • DSCSA & EU FMD • CMO / 3PL Integration • GxP Validated

SUMMARY

SAP ATTP serialization consultant with 12+ years in pharma track-and-trace, including two global full life cycle ATTP implementations run start to finish. Most of that time has been spent on the messy part that actually matters: getting serialized data to move cleanly between a Marketing Authorization Holder and its contract manufacturers and 3PLs. That means standing up trading partners, GLNs, and GTIN/SSCC master data in ATTP, then modeling the EPCIS events - commissioning, packing, shipping, receiving - so commissioning runs at a CMO and fulfillment at a 3PL land the way the business expects.

Comfortable owning the functional design end to end, sitting between business, IT, and external partner IT teams, and writing the Implementation Guidelines partners are held to. Everything gets built and documented to survive an audit - GAMP 5, 21 CFR Part 11, the full IQ/OQ/PQ set. Deep on US DSCSA and EU FMD, with production experience across Russia, South Korea, China, and Latin America.

CORE SKILLS

SAP ATTP: Repository configuration, trading-partner (CMO/3PL/wholesaler) setup, location/GLN master, GTIN/SSCC and serial number range management, serial number request-response, commissioning / aggregation / decommissioning, notifications and reporting, partner authorization and authentication settings, AIF interface monitoring (/AIF/IFMON, /AIF/ERR)

GS1 / EPCIS: GTIN, GLN, SSCC, SGTIN; EPCIS event modeling; GS1 CBV business steps and dispositions; EPCIS mapping specs and Implementation Guidelines for partners; 2D DataMatrix

Compliance: US DSCSA (incl. saleable returns / VRS), EU FMD / EMVS, Russia, South Korea, China, Brazil (ANVISA), India, Argentina

Integration: SAP CPI / PI-PO, Dell BOOMI, IDoc / ALE, AS2, SFTP, Web Services; partner onboarding and E2E integration testing; Tracelink

SAP Landscape: S/4HANA, ATTP, EWM / WM, SD, MM, ECC; RISE with SAP (discovery / upgrade impact assessment)

Validation: GAMP 5, 21 CFR Part 11, IQ / OQ / PQ, URS, Functional & Configuration Specs, Traceability Matrix, UAT authoring and execution

Tools: HP ALM, JIRA, SharePoint, Solution Manager

PROFESSIONAL EXPERIENCE

McKesson Corporation Irving, TX

Nov 2023 - Present

SAP ATTP Techno-Functional Consultant | S/4HANA, ATTP, EWM, SD, AIF, HP ALM, JIRA, GxP / 21 CFR Part 11

- Own the functional side of inbound and outbound serialization for the distribution business - receiving verification against supplier EPCIS, and outbound shipping events carrying DSCSA transaction data down to trading partners.
- Set up and maintain trading partners (suppliers, 3PLs, dispensers) in ATTP along with their GLNs, plus the GTIN and lot master that feeds verification.
- Run the DSCSA saleable-returns verification flow - routing requests through the VRS connection and chasing down the mismatches when a serial doesn't verify against the manufacturer.
- Work the SD side daily: sales orders, deliveries, PGI, and making sure the shipping EPCIS event fires at the right point in the delivery cycle.
- Live in AIF (/AIF/IFMON) triaging failed EPCIS messages, and loop in the middleware team when a partner's file drifts off the agreed mapping.
- Supported the RISE with SAP discovery for the serialization landscape - walked the upgrade impacts to ATTP interfaces and master data and put the options in front of the leadership team.
- Migrated master data (locations, GTINs, partner records) during the S/4 move and reconciled serial number history on the way over.

Moderna Cambridge, MA

Nov 2018 - Oct 2023

SAP ATTP Consultant | S/4HANA, ATTP, EWM, SD, CPI / BOOMI, HP ALM, JIRA, GxP / 21 CFR Part 11

- Primary functional contact between the business, IT, and a network of CMOs and 3PLs for anything serialization-related - the person partners escalated to when an exchange broke.
- Ran the AS-IS / TO-BE workshops mapping how serial number requests, commissioning, packing (aggregation), and shipping events move between the MAH and its contract manufacturers.

- Wrote the Implementation Guidelines and EPCIS mapping specs each CMO and 3PL was onboarded against - required event fields, business steps, dispositions, and what a passing test looked like.
- Configured the ATTP repository, business partners, locations (GLNs), and master data (GTINs, SSCCs, serial number ranges), and set the notification and reporting rules per market.
- Chased down the edge cases partners always bring - partial pallets, re-aggregation, and returns - and closed the gaps between standard ATTP and how a given 3PL actually operated.
- Worked with the middleware team on BOOMI and CPI to stand up AS2 and SFTP connections with partners, and used ATTP's partner and authentication settings so only authorized partners could exchange the data they were cleared for.
- Rolled out EU FMD reporting to the EMVS / EU Hub, then layered in Russia, South Korea, and China as those markets came online.
- Integrated ATTP with the automated packaging lines - master data definition and support through IQ / OQ / PQ and PV.
- Wrote functional specs for RICEFW objects, built the test scripts, and led SIT and UAT.

Cynosure Pharma Westford, MA

Apr 2016 - Oct 2018

SAP ATTP Consultant - Global Full Life Cycle Implementation | ATTP, ECC, PI, GxP

- Green-field ATTP build - from an empty repository to the first live CMO connection.
- Gathered requirements across sites and turned them into functional design for commissioning, aggregation, and cross-border shipping.
- Configured the repository, trading partners, locations, and serialized master data; modeled the EPCIS events and mapped them to GS1 business steps and dispositions.
- Stood up the first round of CMO / 3PL EPCIS exchanges and ran end-to-end tests that simulated a CMO production run and a 3PL fulfillment scenario before go-live.
- Authored the FS and configuration specs, built the traceability matrix, and executed the validation deliverables under GAMP 5 / 21 CFR Part 11.
- Owned cutover, go-live, and the hypercare period that followed.

Biogen Research Triangle Park, NC

Feb 2014 - Mar 2016

Serialization Business Analyst - Global Implementation | ERP, ATTP

- Serialization SME for the global master data program - set up and cleaned GTIN / GLN / prefix data and wrote the SOPs around keeping it clean.
- Tracked the moving target of country serialization requirements and translated them into what the business and IT actually had to build.
- Created and extended material master across plants and distribution centers so serialized product could transact end to end.
- Wrote functional specs for RICEFW objects and worked with offshore ABAP on IDoc / BDC / BAPI user exits for new serialization functionality.
- Built LSMW scripts for the data migration, executed UAT and integration test scripts, and supported training and rollout.
- Sat between Quality, Regulatory, and Labeling to keep serialization standards lined up as new products came through.

EDUCATION

Bachelor of Technology, Computer Science & Engineering, 2014 - South Dakota State University
